Drill Hole Intersection Highlights, Newman Todd

1. Approximately 39% Core recovered over this interval
2. Approximately 30% Core recovered over this interval
3. Approximately 50% Core recovered over this interval

Width is calculated as core length and does not imply true width of the zone.

Weighted average gold intervals apply a 0.20 g/t lower cut-off.

Internal dilution within reported intervals does not exceed core lengths of three metres unless otherwise indicated
